

The Terrafirma Ground Report

The Terrafirma Ground Report is a best-in-class ground risks and liabilities report that includes an expert professional opinion, risk assessment and risk transfer on all potential ground hazards.

The Terrafirma Ground Report translates the risk from mining activity, subsidence, sinkholes, radon, fracking, mineral planning activity and much more, allowing the purchaser to better understand the ground. Including Terrafirma's official CON29M, as licensed by the Law Society, the Terrafirma Ground Report utilises never-seen-before data and technology driven solutions to model and intelligently analyse the potential impact of man-made and natural ground perils on property purchase, mortgage lending and development activity.

One of its unique features is that all report outcomes are colour-coded in a traffic light style system to ensure the correct party within the transaction can easily and efficiently action the relevant recommendations. Dynamic next steps and an industry-leading professional opinion ensure the purchaser is fully informed and report terms and conditions containing £10 million professional indemnity cover per report ensures any risks are transferred from the solicitor to the experts at Terrafirma.

The Terrafirma Ground Report also includes an expert analysis of ground movement which identifies 'real-world' evidence of past or current subsidence using investigated subsidence claims, satellite-derived surface deformation and Terrafirma's exclusive SinkholeALERT databases.

RECENT UPDATE

- ▶ Improved clay-related subsidence risk assessment, including future climate change scenarios.
- ▶ The addition of a comprehensive clay subsidence module, using advanced modelling to portray zones of influence from nearby trees.
- ▶ Terrafirma's unique SinkholeALERT forms part of the first page location map, providing up-front information on recorded collapses near to the property.
- ▶ A revised Natural Ground Perils module which identifies the likely risks from slope movement as well as any mapped landslide areas which may affect the property.

AT A GLANCE

-  ▶ The first integrated official Terrafirma CON29M (2018) as licensed by the Law Society.
-  ▶ All other mining searches e.g. tin, metalliferous, limestone, chalk, gypsum, clay, brine, Bath Stone.
-  ▶ Evidence of ground movement analysis, using innovative satellite technologies and never-seen-before data.
-  ▶ All known Natural Ground Perils, including; slope stability, running sands, sinkholes and erosion.
-  ▶ Mineral planning and future mining or extraction activities and oil and gas (including fracking) activities.
-  **Rn** ▶ Comprehensive information on the risk of radon exposure.
-  ▶ Integrated Mine Entry Interpretative Report included as standard when a Coal Mine Entry is identified within 20 metres, speeding up the transaction and saving nearly £150.
-  ▶ Terms and conditions that include £10 million Professional Indemnity cover per report.

understand the ground

At a glance

USP ✓

Dynamic and **colour-coded** next steps, based on a site and property-specific risk assessment.

USP ✓

Includes an **integrated official CON29M**, satisfying the Law Society CON29M (2018) guidance and includes loss of value insurance of up to £100,000.

USP ✓

Expert risk **assessment** and **analysis** included on all ground risks, translated into clear, reliable and practical advice.

USP ✓

Inclusion of industry-leading terms and conditions including **£10 million professional indemnity** cover per report.

USP ✓

New technologies and **data modelling** have increased the pass rate to over 97%, including for ground risks such as clay subsidence, sinkholes and mining.

USP ✓

Includes Terrafirma's unique **SinkholeALERT** database, containing over 9,000 ground collapses.

USP ✓

Traffic light system and legend, highlighting key actions for conveyancer, lender and purchaser.

USP ✓

Unique ground movement data using the latest available **space data** (CGG's InSAR data from Sentinel-1 satellite).

USP ✓

Terrafirma **professional opinion** included for all ground risks, providing reliable answers to any potential impact on completion, value, use or enjoyment.

The Ground Report satisfies Law Society guidance

The 25th Edition of the Law Society Conveyancing Handbook includes guidance, on Mining and Natural Ground Perils. To ensure solicitor due diligence, The Ground Report satisfies new Law Society guidance.

About Terrafirma

Terrafirma is a leader in the provision of ground risk assessment and GeoData. Our team of geologists, engineers and data scientists translate complex ground hazards into clear, accurate, and reliable advice through our market-leading reports, expert opinion and risk models.

Our team is passionate about improving the understanding of the ground and the complex ways it interacts with the Built Environment, offering a comprehensive suite of conveyancing solutions to ensure that the client is fully equipped to make informed decisions. From historical mining, to the future of shale gas extraction and the impact of radon exposure, to the risks of natural ground movement, Terrafirma can not only provide insight to data but the professional opinion required to inform and action where necessary, and provide professional advice for legal and property due diligence.
